Project Design Phase-II
Data Flow Diagram & User Stories

Date	2 November 2026
Team ID	Not provided
Project Name	F1 Racing Data Analytics using Tableau
Maximum Marks	4 Marks

F1 Tableau Data Flow:

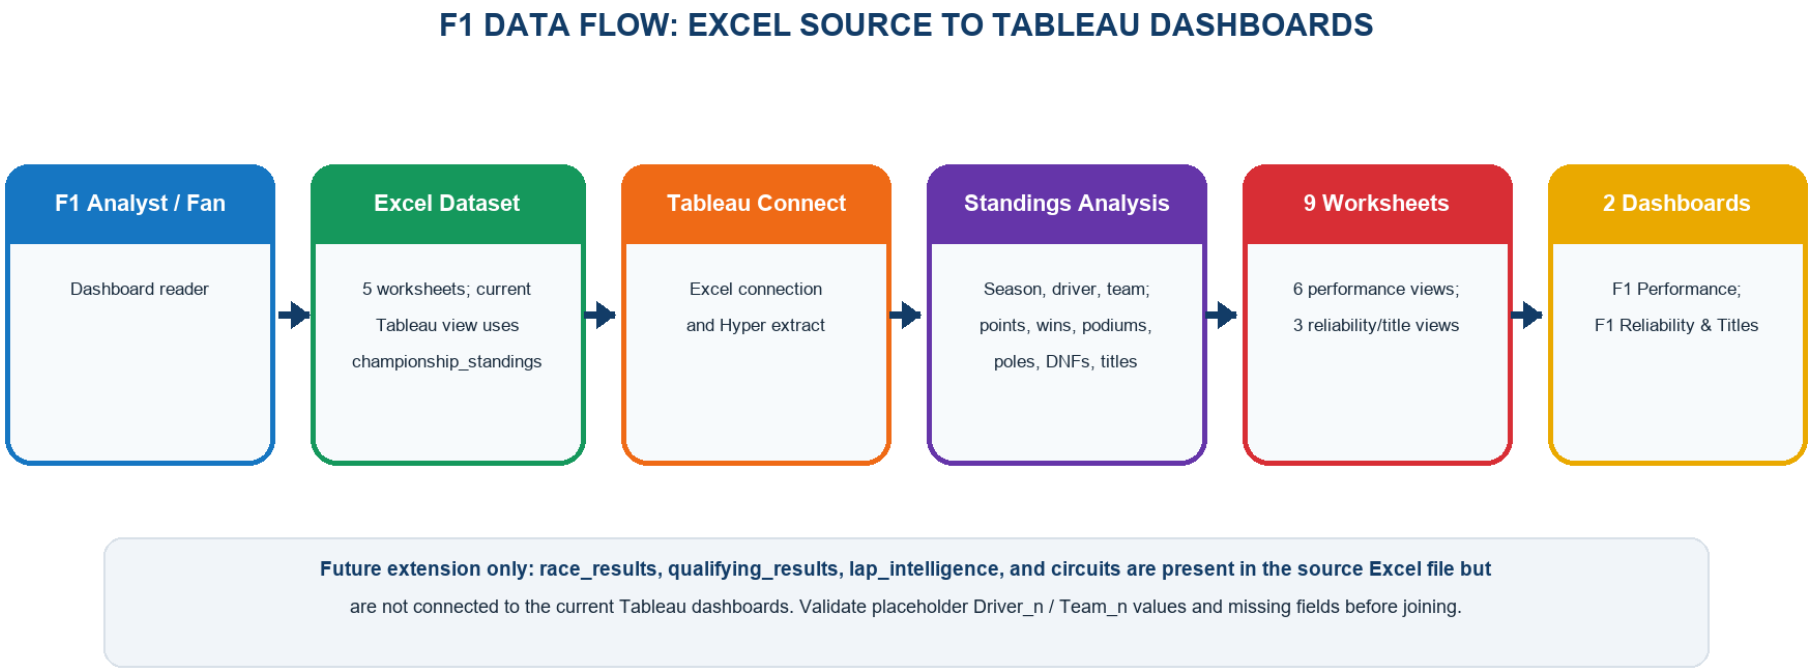

The flow starts with the F1 Racing Project Dataset.xlsx source. Tableau connects to the championship_standings worksheet, prepares the standings extract, and presents driver and team measures through nine worksheets and two dashboards. The other Excel tabs are future sources and require data-quality validation before integration.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	**External Entity**	A person, organization, or system outside the project that sends or receives data (e.g., Customer, Payment Gateway).
Rectangle with numbered header	**Process**	An activity that transforms incoming data into outgoing data (e.g., Validate Request, Process Order).
Rectangle (solid fill, no number)	**Data Store**	A place where data is held for later use (e.g., Customer Database, Inventory).

Labeled arrow	**Data Flow**	The movement of data between entities, processes, and data stores, labeled with what data is being passed.

F1 racing performance analytics - Level 1 DFD

User Stories

The user stories below describe current dashboard capabilities and clearly marked future enhancements.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
F1 Analyst	Driver Performance	USN-1	As an analyst, I can compare championship points by driver.	Dashboard shows driver points from the connected standings data with clear labels.	High	Current
F1 Analyst	Driver Performance	USN-2	As an analyst, I can compare driver wins and podiums.	Separate views show each driver and metric from the standings source.	High	Current
F1 Analyst	Team Performance	USN-3	As an analyst, I can compare points by team.	Team totals are displayed with team names and a consistent points definition.	High	Current
F1 Analyst	Team Performance	USN-4	As an analyst, I can review poles by team.	The view identifies each team and its pole count in the workbook period.	Medium	Current
F1 Analyst	Driver Performance	USN-5	As an analyst, I can compare average finishing position by driver.	Driver averages are displayed with the metric identified as average finish.	Medium	Current
F1 Analyst	Reliability	USN-6	As an analyst, I can compare DNFs by driver.	DNF counts are shown by driver using the standings source.	High	Current
F1 Analyst	Championship History	USN-7	As an analyst, I can review titles by driver.	The title view summarizes title counts by driver for the source period.	Medium	Current
F1 Analyst	Team / Driver Analysis	USN-8	As an analyst, I can explore team-driver wins in a heatmap.	Heatmap distinguishes driver and team combinations and reflects workbook values.	Medium	Current
F1 Analyst	Season Filtering	USN-9	As an analyst, I want to filter views by season.	Proposed: add and verify a season filter across applicable sheets before release.	Low	Future

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Data Steward	Refresh & Quality	USN-10	As a data steward, I can check the standings extract after refresh.	Reconcile row count and season range; record refresh date and discrepancies.	High	Operational
Data Steward	Source Expansion	USN-11	As a data steward, I can validate other Excel tabs before joining them.	Future integration requires checking placeholders and missing fields in each tab.	Medium	Future
F1 Analyst	Metric Clarity	USN-12	As an analyst, I can identify dashboard scope and metric definitions.	Labels and documentation state source period and define each metric.	Medium	Proposed
