# Project Design Phase-II
# Technology Stack (Architecture & Stack)

| | |
|---|---|
| Date | 2 November 2026 |
| Team ID | Not provided |
| Project Name | F1 Racing Data Analytics using Tableau |
| Maximum Marks | 2 Marks |

**Define Your Technology Stack:**

Identify the technologies, platforms, databases, BI tools, and integrations that you will use to build your Business Intelligence solution. A well-chosen technology stack helps ensure that the solution is scalable, maintainable, secure, and suitable for data analysis and reporting requirements.

| S.No | Component | Description | Technology | Justification / Purpose |
|---|---|---|---|---|
| 1 | Source Data | F1 standings dataset; five worksheets exist in Excel. | Microsoft Excel (.xlsx) | Current Tableau workbook is connected to championship_standings only. |
| 2 | Data Connection | Read data from the Excel source into Tableau. | Tableau Excel connector | Matches the supplied workbook connection; other tabs are not currently used. |
| 3 | Extract | Cached analytical data used by the workbook. | Tableau Hyper extract | Workbook includes a Hyper extract alongside the Excel connection. |
| 4 | Visualization | Author and view nine worksheets and two dashboards. | Tableau workbook (.twb) | Workbook contains six performance views and three reliability/title views. |
| 5 | Analysis | Aggregate standings fields into displayed metrics. | Tableau worksheet aggregations / calculated fields | Supports points, wins, podiums, poles, average finish, DNFs, titles, and heatmap views. |
| 6 | Delivery | Open or share the workbook using available Tableau environment. | Tableau Desktop workbook; environment unspecified | No Tableau Server or Cloud deployment was provided; publishing is not assumed. |
