Project Design Phase-I
Solution Architecture

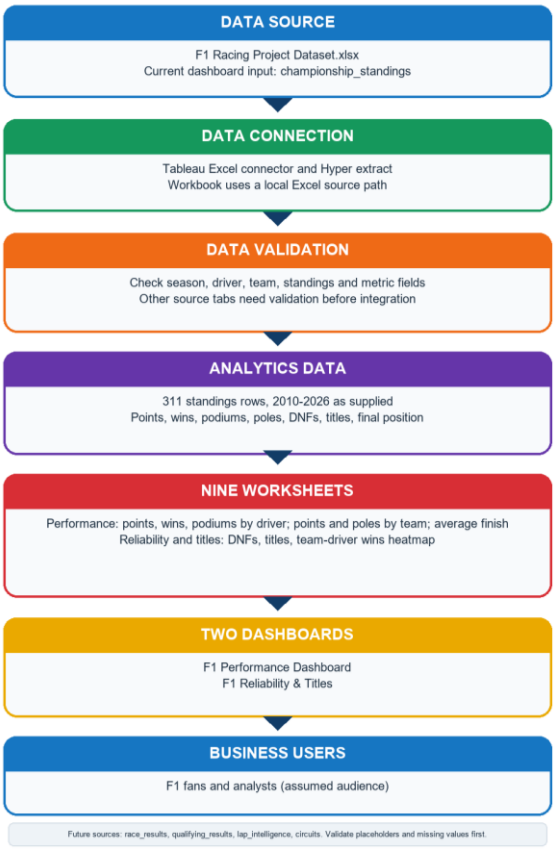

Date	2 November 2026
Team ID	Not provided
Project Name	F1 Racing Data Analytics using Tableau
Maximum Marks	4 Marks

Solution Architecture:

This architecture describes the supplied F1 Tableau workbook, its Excel data source, the current standings analysis, and two dashboards. The workbook currently uses championship_standings only.

- Connect F1 Racing Project Dataset.xlsx through Tableau's Excel connector and Hyper extract.
- Use nine Tableau worksheets to summarize driver and team championship performance, reliability, titles, and team-driver wins.
- Arrange six performance views in F1 Performance Dashboard and three reliability/title views in F1 Reliability & Titles.
- Keep data quality checks and source period visible; validate other Excel tabs before planning future integration.

F1 Tableau Solution Architecture Diagram:

Component Description Table

Component Name	Description / Role in Architecture	Technology Used
Excel Source	F1 Racing Project Dataset.xlsx; current workbook input is championship_standings.	Microsoft Excel (.xlsx)
Connection and Extract	Workbook connects to the local Excel file and includes a Hyper extract.	Tableau Excel connector; Hyper
Analysis and Presentation	Nine worksheets support two dashboards for performance, reliability, titles, and team-driver wins.	Tableau workbook (.twb)
